FEAR AND FASCINATION AROUND AI'S ROLE IN MODERN WORKFLOW AUTOMATION

The age of Artificial Intelligence is upon us and RPA (Robotic Process Automation) might sound like a lost chapter out of a Terminator script. It may scary to think about, but in practice can be truly transformative for most businesses. Reid will reveal research data, emerging trends and practical use cases that will change the face of electronic records management forever.

About Reid Blackburn

Reid is the Director of Automation at Fisher's Technology, where he leads a team of Solution Consultants, Design and Application Engineers, implementing simple to complex software and services solutions to clients throughout the region based in capture, content and knowledge management strategies.

Since 1996, Reid has held several professional services consulting and leadership roles in Fortune 100/500 corporations and more recently with Fisher's Technology since 2014.

He's proud to be a native Idahoan and considers the Treasure Valley to be the first and last place he ever plans to be found in.
