

# OVERCOMING GLOBAL CHALLENGES: IMPLEMENTING A RETENTION SCHEDULE ACROSS 34 COUNTRIES

*This presentation will dive into the complexities and challenges faced while implementing a global retention schedule across 34 countries, highlighting the need to balance corporate retention mandates with diverse local regulations. We will explore the specific requirements of Original Equipment Manufacturers (OEMs) and the distinct retention needs for research and development, including a retention period of +15 years.*

*Using General Motors as a case study, which mandates a 50-year retention period, we will discuss how Magna successfully aligned its practices with ISO standards while navigating customer retention requirements that are outside of the Magna retention requirements.*

*Attendees will learn about the multifaceted challenges of executing a unified retention strategy that not only fulfills internal corporate policies but also addresses customer demands. We will also tackle critical issues related to privacy and security, especially the implications of GDPR compliance in European nations, emphasizing the importance of safeguarding sensitive information throughout the retention process.*

*Join us for an engaging session that offers insights into the strategic approaches needed to effectively manage global data retention in a complex regulatory landscape.*
